

**FOR IMMEDIATE RELEASE:**

**Remote Medical Technologies to Feature ROSE Now™ and Section Now™ at Pathology Visions in San Diego**

*Advancing real-time telecytology evaluations and rapid frozen section assessments with unmatched speed and image quality.*

**MELVILLE, NEW YORK** – Remote Medical Technologies (RMT), a pioneer in live-dynamic telepathology solutions, will highlight its latest platforms, **ROSE Now™** and **Section Now™**, at the Digital Pathology Association's Pathology Visions Annual Conference, taking place October 5–7 in San Diego. Attendees can explore RMT's innovations firsthand at **Booth #609**, where live demonstrations and previews of upcoming capabilities will be showcased.

Designed specifically for real-time telecytology rapid on-site evaluations (ROSE) and remote frozen section assessments, **ROSE Now™** and **Section Now™** deliver instantaneous responsiveness with exceptional image clarity. Available on either a Remote Robotic Controlled (RRC) microscope, with or without a height-adjustable mobile cart or a stationary non-robotic setup, these systems enable secure, high-quality image streaming from nearly any device, be it a PC, Mac®, iPhone®, iPad®, or Android™. These platforms empower pathologists to make faster, more confident decisions during time-critical procedures by minimizing turnaround time and fitting seamlessly into existing workflows.

RMT will also display its **F50 Automated Slide Preparation Device**, an automated system that produces liquid-based cytology slides in just 20 seconds using advanced filtration technology. The F50 improves efficiency by ensuring consistent results and preserving cell integrity.

To further support clinical reliability, RMT integrates **rmtHealthCheck™**, an automated monitoring feature that detects and reports network issues in real time. This proactive tool helps IT teams and clinical staff address potential problems before they affect patient care. "Rapid remote evaluation during procedures is no longer a luxury—it's the new standard," said Don Marchon, Founder & CEO of RMT. "**ROSE Now™** and **Section Now™** equip cytopathologists and surgical pathologists with the performance and confidence needed for time-sensitive cases such as FNAs and frozen sections." Conference attendees will also get a look at upcoming enhancements, including secure chat, expanded administrative tools, and deeper system performance analytics; all designed to increase uptime, productivity, and assurance in every case.

Visit **RMT at Booth #609** to experience **ROSE Now™** and **Section Now™** in action. For demo scheduling, contact:
